

What is MyAgData®?

MyAgData is a Web application that automates the data collection and reporting process required by the USDA to satisfy obligations for both crop insurance and FSA program participation.

What Do I Need to Get Started?

For the Nebraska 2019 Spring ACRSI Pilot, you'll need the data from your planter and you'll need to create a MyAgData account (which we'll show you how to do).

How Much Will This Cost?

Not a thing. The USDA is covering the cost of reporting during the Nebraska pilot.

Create Your MyAgData Account

1. Open your favorite Web browser and go to **nebraska.myagdata.com**.
2. You'll need to create an account, so click this button on the Sign On page.

Don't Have an Account? [Create One Here!](#)

3. Provide the required information asked for on the Register Here! page. What you need to give depends on whether you register as an individual or a business.
4. Click **Create My Account**. You'll receive a confirmation email from info@myagdata.com with more instructions.

Start Your Report

After you sign on, you'll come to the MyAgData home page. The progress bar shows you where you are in the report creation process.

The tile shown below is your starting point for a season's report. You'll accumulate these tiles as you complete reports for subsequent seasons. Click **Not Started** to begin.

Choose Your Crops and Practices

The "default" crops you see in MyAgData are ones most commonly planted in your county.

MyAgData applies default irrigation, organic and planting practices to all of your insurable crops.

Your Precision Ag Data

For the Nebraska 2019 Spring ACRSI Pilot, you'll only be able to use the precision ag planting data from your field equipment to build your report.

You'll usually have your data stored as one or more files on a flash drive or on your computer, or in a manufacturer cloud storage platform.

Review Your Fields

Take a look at the fields that appear as shown in the data you imported. Make sure the information shown is correct! You'll have a chance to create a review copy to ensure all fields are correct.

Send Your Data

Everything look good? Send your data to the USDA! As of this Spring, you'll still need to go to your County Service Center to physically sign your acreage report.
